EDUCATION

Johns Hopkins University **Baltimore, MD**
B.S. Computer Science, Whiting School of Engineering *Expected May 2030*
- The King's Academy, graduated May 2026. AP scores: Computer Science A (5), Calculus BC (5), Chemistry (5), Physics 1 (5), US History (5), Government (5), Precalculus (5), Psychology (5), CSP (5), English Language (4).

EXPERIENCE

ASDRP Student Researcher **Fremont, CA**
Aspiring Scholars Directed Research Program (ASDRP)
- Helped build an iOS app that centralizes ASDRP deadlines, attendance, forms, and member discovery.
- Implemented to-do and important-forms modules to provide lab-specific, due-date-driven workflows.
- Developed Project Deep Freezer: Raspberry Pi and OCR monitoring with PagerDuty alerts for freezer temperature risks.

STEM Mentor and AP CSP Support **San Jose, CA**
King's Academy Bridge Program
- Mentored students in school STEM activities and supported project planning and debugging.
- Helped teach sections of AP Computer Science Principles through Bridge.

PROJECTS

ASDRP Central
Swift, Firebase Auth, Firestore
- Designed core student workflows for lab updates, attendance, and tasks in a single iOS interface.
- Implemented profile explorer and internal navigation patterns to improve discoverability across labs.

Project Deep Freezer **Completed**
Raspberry Pi, OpenCV, EasyOCR, PagerDuty
- Built low-cost OCR-based freezer monitoring to detect temperature drift from native displays.
- Added ROI selection flow and OCR testing to reduce false alarms and improve reliability.

AI-InvestiBot **Completed**
Python, PyTorch, Pandas
- Created a reusable training pipeline with walk-forward validation for stock-model experiments.
- Implemented model-voting evaluation to compare directional and return-based strategies.

TECHNICAL SKILLS

Languages: Python, Swift, C, C++, Java
Frameworks: Flask, Firebase Auth, Firestore, PyTorch, OpenCV, EasyOCR
Developer Tools: Git, GitHub, PagerDuty, Raspberry Pi
Focus Areas: iOS app development, OCR monitoring, applied machine learning
